## PROJECTS

**Green Routine — LaunchCode Capstone Project**

A web application that empowered users to sign up for and create daily challenges focused on environmental initiatives, highlighting the impact of their actions

- Developed search feature that filters challenges by categories, leaderboard to display user rankings, and a custom point system (“Leaves”) to track carbon impact using API
- Set up database connections to support global and personal challenges.
- Full Project Tech Stack: React, C#, MySQL, Carbon Interface API

**Portfolio — In Progress**

- Developed with React.js
- Current Features: Landing page with descriptions, and GitHub integration
- Upcoming Features: Viewable resume, integration of other projects, mobile responsive UI
